SUMMARY

Full Stack Software Engineer with **2+ years** of experience building production-grade, multi-tenant web platforms across **React** frontends and **Node.js/Express** backends. Comfortable owning features end-to-end — from data modeling and secure REST API design to responsive, high-performance UI. Independently built and deployed **Gymzy**, a live multi-tenant SaaS with recurring **Razorpay** billing, HMAC-verified webhooks, and RBAC-scoped dashboards. Shipped enterprise HRMS, recruitment, and gig-economy systems for clients including **Blinkit, Swiggy, Zippee UAE, DishTV, NX Group, and DTDC Australia**. Strong in the **MERN** stack, REST API design, JWT/refresh-token authentication and RBAC, payment integrations, and CI/CD. 500+ LeetCode problems solved.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, C++
Backend	Node.js, Express.js, REST APIs, Socket.IO, JWT/Auth & RBAC, Flask
Frontend	ReactJS, Next.js, Redux Toolkit, React Query, Tailwind CSS
Database	MongoDB, PostgreSQL, Firebase (RTDB + Auth)
Payments & Media	Razorpay (recurring billing, HMAC webhooks), Cloudinary, Firebase
DevOps & Tools	Docker, Kubernetes, Azure, CI/CD, Git, Postman, SonarQube
Foundations	Data Structures & Algorithms (500+ LeetCode), System Design (basics)
AI Tools	Claude, Cursor, Codex, Windsurf, Antigravity

EXPERIENCE

Frontend Developer July 2025 - Present
ISourse Technologies Pvt Ltd *Delhi, India*

- Architected config-driven **React + TypeScript** platforms spanning CRM, HRMS, Recruitment, and Gig-Economy products for **8+ enterprise clients** (Blinkit, Swiggy, DishTV, NX Group, DTDC Australia, XpressBees); cut feature-development time ∼30% via a reusable Redux Toolkit component architecture.
- Designed a unified **JWT login + refresh-token architecture** with Axios interceptors securing **1,000+ API endpoints**; shipped production **RBAC** and permission management for gig-economy onboarding and POD validation (XpressBees).
- Built end-to-end **Recruitment & Onboarding workflows** — candidate management, shortlisting, assessment tracking, and employee onboarding — plus dynamic master-data mapping across 5+ entities (departments, designations, functional areas, employee types, courses) ensuring data consistency across HRMS portals.
- Engineered a **LeetCode-style online assessment portal** with an in-browser code editor and anti-cheating controls (real-time face-presence detection, forced full-screen lock, copy-paste blocking) plus automated PDF reports — now used by **DishTV, Zippee, and ISourse to evaluate 300+ candidates**.
- Diagnosed and optimized high-latency APIs, integrated complex enterprise services, mentored interns, and enforced **SonarQube** reviews and **Azure DevOps CI/CD** across India and UAE market instances.

Software Development Engineer Intern January 2024 - June 2024
Nyalazone Solutions *Noida, India*

- Built a full-stack **Asset Management System** using Angular (frontend) and Flask (backend) to track employee assets and state transitions, integrated with a PostgreSQL database on AWS.
- Optimized backend query performance ∼25% through indexing and query restructuring; contributed across 3 Agile sprints and influenced core system architecture decisions.

PROJECTS

Gymzy — Multi-Tenant Gym Management SaaS - Live - GitHub *React 18, TypeScript, NodeJS, ExpressJS, MongoDB, Razorpay*

- Solely designed, built, and deployed a live B2B SaaS (gymzy.in) on a multi-tenant model (owner → multiple gyms → admins, trainers, members) with role-isolated, RBAC-scoped dashboards and separate route trees and API scopes per role.
- Implemented recurring subscription billing via **Razorpay** with server-side **HMAC webhook verification** and a full subscription state machine (trial → active → past-due → expired); a global 403 interceptor refreshes subscription state in real time without a page reload.
- Engineered an internal **ad-network module** (5 placements, role/gym targeting, per-impression analytics) as a platform revenue stream, alongside e-commerce, workout planning, attendance, and Recharts revenue dashboards.
- Optimized performance with **React Query** caching and server-side pagination (keepPreviousData), Cloudinary uploads with progress, and isolated re-renders via memoization.

Near-By — Real Estate Marketplace - Live - GitHub *ReactJS, NodeJS, ExpressJS, MongoDB, Firebase*

- Built a MERN real estate marketplace with **JWT + Google OAuth**, full listing CRUD, advanced search/filter, and Firebase image uploads.
- Cut redundant API calls ∼40% through Redux Toolkit caching and selector memoization; deployed on Render.
