SUMMARY

Full Stack Software Engineer with **2+ years** of experience building production-grade, multi-tenant web platforms across **React / Next.js** frontends and **Node.js/Express** backends. Currently building **Web3 payment** products at **Actalink** (London) — crypto payment links, subscriptions, and hosted checkout on **blockchain** and **stablecoin** rails. Comfortable owning features end-to-end, from data modeling and secure API design to responsive, high-performance UI. Independently built and deployed **Gymzy**, a live multi-tenant SaaS with recurring **Razorpay** billing, HMAC-verified webhooks, and RBAC-scoped dashboards. Shipped enterprise HRMS, recruitment, and gig-economy systems for clients including **Blinkit, Swiggy, DishTV, NX Group, and DTDC Australia**. Strong in the **MERN** stack, REST API design, JWT/refresh-token authentication and RBAC, payment integrations, and CI/CD.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, C++
Backend	Node.js, Express.js, REST APIs, Socket.IO, JWT/Auth & RBAC, Flask
Frontend	ReactJS, Next.js, Redux Toolkit, React Query, Tailwind CSS
Database	MongoDB, PostgreSQL, Firebase (RTDB + Auth)
Payments & Web3	Razorpay (recurring billing, HMAC webhooks), crypto payments, stablecoins
DevOps & Tools	Docker, Kubernetes, Azure, CI/CD, Git, Postman, SonarQube, Cloudinary
Foundations	Data Structures & Algorithms (500+ LeetCode), System Design (basics)
AI Tools	Claude, Cursor, Codex, Windsurf, Antigravity

EXPERIENCE

Software Engineer September 2026 - Present
Actalink *Remote — London, UK*

- Building **Web3 payment** products — crypto payment links, recurring subscriptions, and hosted checkout experiences — on **blockchain**, cryptocurrency, and **stablecoin** rails.
- Evolving the **React** platform and driving its migration to **Next.js** for improved performance, SEO, accessibility, and scalability.
- Authoring **developer documentation** for crypto checkout APIs, subscription Paylinks, payment tracking, blockchain payment **webhooks**, and subscription cancellation.
- Partnering with product and engineering on **multi-chain payments**, supported tokens, crypto wallets, and **stablecoin settlement**; contributing to upcoming merchant-payment and Web3 developer-platform features.

Frontend Developer July 2025 - August 2026
ISourse Technologies Pvt Ltd *Delhi, India*

- Architected config-driven **React + TypeScript** platforms spanning CRM, HRMS, Recruitment, and Gig-Economy products for **8+ enterprise clients** (Blinkit, Swiggy, DishTV, NX Group, DTDC Australia, XpressBees); cut feature-development time ∼30% via a reusable Redux Toolkit component architecture.
- Designed a unified **JWT login + refresh-token architecture** with Axios interceptors securing **1,000+ API endpoints**; shipped production **RBAC** and permission management for gig-economy onboarding and POD validation (XpressBees).
- Built end-to-end **Recruitment & Onboarding workflows** — candidate management, shortlisting, assessment tracking, and employee onboarding — plus dynamic master-data mapping across 5+ HRMS entities ensuring data consistency across portals.
- Engineered a **LeetCode-style online assessment portal** with an in-browser code editor and anti-cheating controls (real-time face-presence detection, forced full-screen lock, copy-paste blocking) plus automated PDF reports — now used by **DishTV, Zippee, and ISourse to evaluate 300+ candidates**.

Software Development Engineer Intern January 2024 - June 2024
Nyalazone Solutions *Noida, India*

- Built a full-stack **Asset Management System** (Angular + Flask, PostgreSQL on AWS) tracking employee assets and state transitions; optimized backend query performance ∼25% via indexing and query restructuring across 3 Agile sprints.

PROJECTS

Gymzy — Multi-Tenant Gym Management SaaS - Live - GitHub *React 18, TypeScript, NodeJS, ExpressJS, MongoDB, Razorpay*

- Solely designed, built, and deployed a live B2B SaaS (gymzy.in) on a multi-tenant model (owner → multiple gyms → admins, trainers, members) with role-isolated, RBAC-scoped dashboards and separate route trees and API scopes per role.
- Implemented recurring subscription billing via **Razorpay** with server-side **HMAC webhook verification** and a full subscription state machine (trial → active → past-due → expired); a global 403 interceptor refreshes subscription state in real time without a page reload.
- Engineered an internal **ad-network module** (5 placements, role/gym targeting, per-impression analytics) as a revenue stream, plus e-commerce, workout planning, attendance, and Recharts revenue dashboards.
- Optimized performance with **React Query** caching and server-side pagination (keepPreviousData), Cloudinary uploads with progress, and isolated re-renders via memoization.

Near-By — Real Estate Marketplace - Live - GitHub *ReactJS, NodeJS, ExpressJS, MongoDB, Firebase*

- Built a MERN real estate marketplace with **JWT + Google OAuth**, full listing CRUD, advanced search/filter, and Firebase image uploads; cut redundant API calls ∼40% via Redux Toolkit caching and selector memoization (deployed on Render).

CERTIFICATIONS

IBM Full Stack Software Developer · **Front End Apps with React** · **Back-End with Node.js & Express** — Coursera 2024
